A RADICAL REIMAGINATION — CONFIDENTIAL

What if your entire technology organisation was 5 *people and a file?*

One markdown file defines your enterprise DNA—architecture, security, compliance, design patterns. Five exceptional humans provide judgement. Claude Code does everything else.

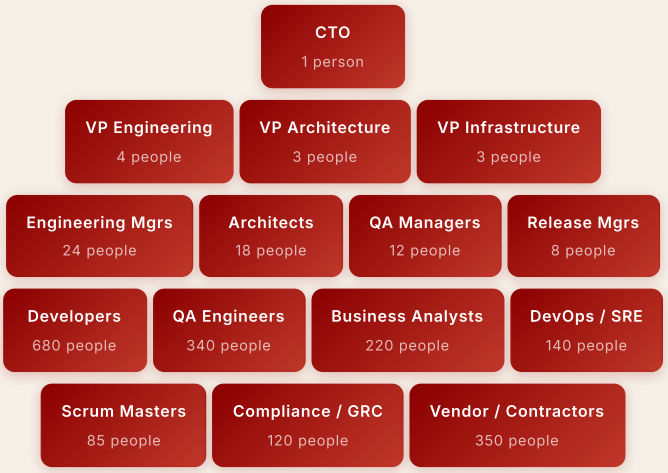
A World-Class Bank

POWERED BY CLAUDE CODE

THE BRUTAL TRUTH

Your Technology Organisation Was Designed for a World That No Longer Exists

You employ 2,000 technologists. You spend $800M a year. And a single application still takes 44 weeks to reach production. Here is where the money actually goes.

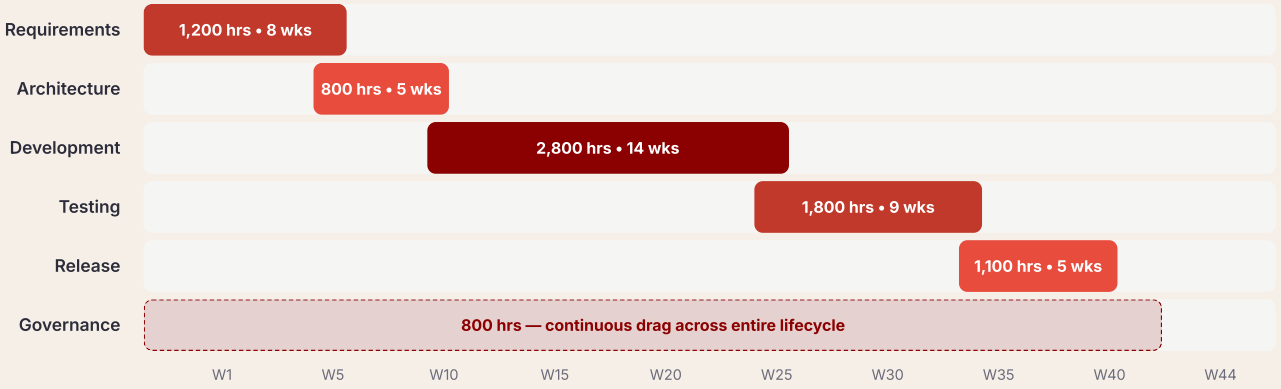


CURRENT TECHNOLOGY HEADCOUNT

2,008 PEOPLE • $813M / YEAR

One Application: 8,500 Hours Across 44 Weeks

14 handoffs • 6 governance gates • 23 approval steps • 34% rework rate



TOTAL DELIVERY EFFORT PER APPLICATION

62% is wait time • 34% rework rate • $4.2M blended cost

8,500 hrs

62%

WAIT TIME

Only 38% of effort is value-adding. The rest is queues, handoffs, and approvals.

14

TEAM HANDOFFS

Each handoff: 3-5 days queue time, context loss, and rework trigger.

$4.2M

PER APPLICATION

100 apps/year = $420M in delivery alone, before run-the-bank costs.

25%

TIME CODING

Your engineers spend 75% of their time in meetings, docs, and process.

What If 95% of This Effort Was Never Necessary?

Consider what your 2,008-person technology organisation actually does. Strip away the coordination, the handoffs, the documentation theatre, the environment provisioning, the regression testing, the manual code review, the compliance evidence gathering.

What remains is judgement. Product judgement about what to build. Technical judgement about how to structure it. Data judgement about how to model it. Risk judgement about how to govern it.

Everything else—the writing of code, the writing of tests, the writing of documentation, the running of pipelines, the generation of evidence, the scanning for vulnerabilities, the assembly of deployment packages—**is execution that Claude Code can perform autonomously, at machine speed, with perfect consistency.**

The question is not "how do we make our 2,000 people 30% more productive?" The question is: **"what if we only needed the people who provide irreplaceable human judgement?"**

The answer is five.

95%

of technology effort is execution, not judgement

Writing code	Execution
Writing tests	Execution
Code review	Execution
Deployment scripting	Execution
Documentation	Execution
Environment setup	Execution
Compliance evidence	Execution
Security scanning	Execution
Regression testing	Execution
Incident triage	Execution
Architecture & judgement	**Human**
Product & risk decisions	**Human**

THE ENTERPRISE DNA

bank.md: One File to Rule Them All

Instead of 120 GRC analysts, 18 architects, and 340 QA engineers enforcing standards manually, a single markdown file becomes the immutable constitution of your technology estate.

bank.md — Enterprise Archetype Definition

```
# BANK.MD — Global Enterprise Archetype
# This file is the single source of truth for all technology standards.
# Every Claude Code agent inherits these rules. No exceptions. No overrides.

## 1. Architecture Standards
default_pattern: event-driven-microservices
api_standard: OpenAPI 3.1 with mandatory contract-first design
data_residency: all PII must reside in-region (EU: Frankfurt, APAC: Singapore, US: Virginia)
service_mesh: mandatory mTLS between all services, zero-trust networking
database: PostgreSQL (OLTP), Snowflake (analytics), Redis (caching) — no exceptions
max_service_size: 500 lines of business logic. If exceeded, decompose.

## 2. Security & Compliance Layer
RULE: No secrets in code. All credentials via HashiCorp Vault.
RULE: All inputs sanitised. No raw SQL. Parameterised queries only.
RULE: PII must be encrypted at rest (AES-256) and in transit (TLS 1.3).
RULE: All API endpoints require OAuth 2.0 + RBAC. No anonymous access.
RULE: OWASP Top 10 scan on every commit. Block merge on P1/P2.
RULE: SOX evidence auto-generated for every production change.
RULE: 4-eyes principle enforced — no self-approval of PRs to production.

## 3. Testing & Quality Standards
MANDATORY: Unit test coverage ≥ 90% on all business logic.
MANDATORY: Integration tests for every API contract.
MANDATORY: Performance baseline — P99 latency < 200ms for all APIs.
MANDATORY: Chaos testing for all Tier-1 services before release.
test_generation: Claude generates tests AT CODE CREATION. No separate QA phase.
regression: Full regression suite runs in CI. Takes minutes, not weeks.
security_scan: SAST + DAST on every PR. Results in < 60 seconds.

## 4. Design System & UX
design_system: Bank Design System v4 (Figma tokens auto-synced)
accessibility: WCAG 2.2 AA mandatory. No exceptions.
responsive: Mobile-first. All interfaces must work on 320px viewport.

## 5. Deployment & Operations
deployment: GitOps via ArgoCD. All infra as Terraform. No manual provisioning.
rollback: Automated canary with < 5min rollback on error rate > 0.1%.
observability: OpenTelemetry mandatory. Traces, metrics, logs on every service.
incident_response: Claude monitors, triages, and drafts RCA. Human approves.

## 6. Governance & Audit
Every Claude action logged with: who requested, what generated, hash of output.
All production changes require human approval (CCO for Tier-1, Engineer for Tier-2+).
Audit evidence generated as by-product. Zero manual compliance effort.
Regulatory change detection: auto-flag when new regulation impacts codebase.
```

ARCHITECTURE

Replaces 18 architects and ARB committees. Every Claude agent inherits patterns automatically. Deviations are structurally impossible.

SECURITY & POLICY

Replaces manual security reviews, penetration testing queues, and policy documents nobody reads. Controls are enforced in real-time, not reviewed post-hoc.

TESTING & QUALITY

Eliminates the entire QA phase. Tests are generated with code, run in seconds, and gate every merge. The 1,800-hour testing bottleneck simply vanishes.

GOVERNANCE & AUDIT

Replaces 120 compliance analysts generating evidence after the fact. Every action is an audit event. Compliance becomes a by-product, not a burden.

bank.md is inherited by every Claude Code agent in the organisation. It cannot be overridden at the project level. It is version-controlled, peer-reviewed by the five humans, and constitutes the legally auditable standard of your technology estate. **When you change bank.md, you change the DNA of every application simultaneously.**

THE FIVE

Five Humans. Infinite Capability.

Each person provides irreplaceable human judgement. Claude Code provides everything else—at scale, speed, and consistency no human team can match.

POWERED BY
bank.md
+ Claude Code

01 Chief Product Officer

Translates business strategy into product vision. Decides *what* to build and *why*. The sole human interface between the business and the technology machine.

OWNS

- Product roadmap and prioritisation
- Business requirements (conversational, not BRD)
- Stakeholder alignment and communication
- Feature trade-off decisions
- Customer experience strategy

Claude handles: Analysing customer data, generating user stories, mapping regulatory requirements to features, competitive analysis, writing product documentation

02 Chief Technology Officer

The master builder. Reviews what Claude Code generates, handles edge cases that require creative problem-solving, and evolves bank.md's architecture patterns.

OWNS

- Architecture evolution in bank.md
- Review & approval of Claude-generated code
- Complex edge-case engineering
- Platform and infrastructure decisions
- Performance and scalability strategy

Claude handles: All code generation, test creation, refactoring, CI/CD pipeline management, IaC provisioning, dependency management, performance profiling, incident remediation

03 Chief AI Architect

The architect of the AI operating system itself. Designs and maintains the agentic workflows, MCP servers, guardrails, and tool integrations that give Claude Code its power within the bank.

OWNS

- Claude Code agentic system design & orchestration
- MCP server development & bank system connectors
- Guardrails, permission modes & safety controls
- Prompt engineering & bank.md evolution
- Agent evaluation, observability & performance

Claude handles: Executing the agentic workflows this person designs — multi-step code generation, autonomous testing, deployment orchestration, cross-service refactoring, incident auto-remediation

04

Chief Data Architect

Guardian of the bank's most valuable asset: its data. Designs the data model, ensures lineage and quality, and architects the AI/ML strategy that makes the bank intelligent.

OWNS

- Enterprise data model and lineage
- Data residency and sovereignty rules in bank.md
- AI/ML model governance
- Analytics and reporting architecture
- Data quality strategy

Claude handles: Schema generation, ETL pipeline creation, data quality checks, migration scripts, analytics dashboards, ML model training pipelines, data documentation

05

Chief Compliance Officer

The regulator's trusted counterpart. Ensures every line of code, every deployment, and every data flow meets regulatory requirements. Evolves bank.md's compliance rules.

OWNS

- Regulatory interpretation and policy rules in bank.md
- Approval authority for Tier-1 production changes
- Regulator relationship and audit coordination
- Risk appetite and control framework
- Incident escalation decisions

Claude handles: All audit evidence generation, real-time SOX monitoring, regulatory change detection, compliance reporting, risk scoring, control testing, policy mapping

HOURS

Claude + CCO Approval

Automated canary deployment, zero-downtime rollout, auto-generated change record. CCO clicks "Approve" once. Done.

ZERO-TOUCH

TOTAL: INTENT TO PRODUCTION

Same mid-complexity application • 3 calendar days • 5 humans involved

~22 hrs human + ~50 hrs Claude

"Where did Testing go?" — It didn't go anywhere. It's embedded in Step 2. Read on.

The Death of the Testing Phase

WHY 1,800 HOURS BECOMES 0 SEPARATE HOURS

🚫 **Unit Testing (was: 400 hours)**
Claude generates unit tests at the moment of code creation. 90%+ coverage is a bank.md rule, not a QA checkpoint.
EMBEDDED IN CODE GEN

🚫 **Integration Testing (was: 500 hours)**
Contract-first API design in bank.md means every integration test is generated from the OpenAPI spec automatically. Runs in CI in < 2 minutes.
EMBEDDED IN CI

🚫 **Regression Testing (was: 400 hours)**
Full regression suite is maintained by Claude and runs on every commit. The 9-week manual regression cycle is eliminated entirely.
AUTOMATED < 5 MIN

🚫 **Security Testing (was: 300 hours)**
SAST + DAST runs on every PR. bank.md security rules are enforced at generation time—vulnerabilities are prevented, not detected.
PREVENTED, NOT FOUND

🚫 **UAT (was: 200 hours)**
CPO reviews live application in staging environment generated in minutes. Feedback goes directly to Claude for instant iteration. No UAT team. No UAT cycle.
CPO DIRECT REVIEW

1,800 hours of testing → 0 separate hours

Testing is not removed. It is dissolved into the generation process. Quality is *built in*, not *inspected in*.

LIVE DEMONSTRATION

Watch: A Wealth Advisory CRM Built in 3 Days by 5 People

A complete, production-grade wealth management CRM — client portfolios, AI-driven advisory, risk scoring, regulatory reporting — from first conversation to live pilot. Every command below is real. Every output is what Claude Code actually produces.

ACT 1: FOUNDATION

DAY 1 — MORNING • 09:00

CHIEF TECHNOLOGY OFFICER

Initialises the project with bank.md

The enterprise DNA file is loaded as the foundational context. Every subsequent Claude Code action will inherit these rules.

2 MIN

wealth-advisory-crm — zsh

```
$ mkdir -p wealth-advisory-crm && cd wealth-advisory-crm
$ cp ../enterprise/bank.md CLAUDE.md
$ git init && git add CLAUDE.md && git commit -m "init:
load bank.md as CLAUDE.md enterprise archetype"

✓ Initialized git repository
✓ CLAUDE.md loaded — 6 policy sections active:
    Architecture: event-driven-microservices
    Security: OWASP + AES-256 + TLS 1.3 + OAuth 2.0
    Testing: 90% coverage mandatory, shift-left
    Data: PII encryption, residency rules enforced
    Deployment: GitOps + ArgoCD + canary rollout
    Governance: immutable audit trail, 4-eyes

All Claude Code agents will inherit these constraints.
```

ACT 2: CHIEF AI ARCHITECT WIRES THE NERVOUS SYSTEM

DAY 1 — 09:05 TO 10:30

CHIEF AI ARCHITECT

Builds MCP servers to connect Claude to the bank

Before anyone else can work, Claude Code needs to *talk to the bank*. The Chief AI Architect builds Model Context Protocol (MCP) servers — typed, secure tool interfaces that give Claude access to core banking systems, market data, compliance engines, and infrastructure APIs. These are the hands and eyes of the AI.

45 MIN DESIGN + REVIEW

claude — Chief AI Architect session

```
$ claude "Build MCP servers for the Wealth Advisory CRM
  project. I need Claude Code to have typed, secure
  tool access to:

  1. SAP FICO (read: client accounts, balances)
  2. Bloomberg B-PIPE (read: real-time market data)
  3. Refinitiv World-Check (read: KYC/AML screening)
  4. Internal Auth (read/write: OAuth tokens, RBAC)
  5. AWS Infrastructure (read/write: deploy, scale)
  6. PostgreSQL (read/write: application database)
  7. Jira/Confluence (read/write: project tracking)
  8. Compliance Engine (read: regulatory rules)

  Each MCP server must enforce CLAUDE.md security
  rules. All actions logged to audit trail."

⏳ Generating MCP server framework...
⏳ Building typed tool definitions...

✓ MCP servers generated: 8 servers, 47 tools
  mcp-servers/sap-fico/
    Tools: get_client, get_balances, get_transactions
    Auth: service account + mTLS | Read-only
  mcp-servers/bloomberg/
    Tools: get_quotes, get_history, stream_prices
    Auth: B-PIPE certificate | Read-only
  mcp-servers/refinitiv-kyc/
    Tools: screen_client, get_risk_score, check_pep
    Auth: API key via Vault | Read-only
  mcp-servers/aws-infra/
    Tools: deploy_service, scale_cluster, get_metrics
    Auth: IAM role + session token | Read-write
  mcp-servers/postgres/
    Tools: query, migrate, seed, backup
    Auth: Vault-managed credentials | Read-write
    + 3 more servers

✓ All secrets via HashiCorp Vault (per CLAUDE.md)
✓ Audit logging: every tool call → audit_log table
✓ Rate limiting & circuit breakers configured
✓ Tests: 89 integration tests, all passing
```

```
claude — agentic system config

$ claude "Configure the agentic system for the Wealth
                                Advisory CRM. Define:

        1. Agent roles: code-gen, test-gen, reviewer,
      deployer, compliance-checker, incident-responder
    2. Permission modes per role (who can approve what)
       3. Hooks: pre-commit security scan, post-deploy
                 smoke test, pre-merge compliance check
          4. Guardrails: max file changes per session,
      blocked operations (no direct DB writes in prod,
                   no secret access without approval)
            5. Orchestration: multi-agent pipeline for
                                full feature delivery"

          ⏳ Configuring agent roles & permissions...
                              ⏳ Building hook system...
                              ⏳ Defining guardrails...

                           ✓ Agentic system configured:

                                          Agent Roles:
    code-gen      → can write/edit code, read MCP tools
      test-gen      → can write tests, run test suites
       reviewer      → read-only code, can flag issues
  deployer      → can trigger deploy (requires human OK)
      compliance    → read-only, can run control audits
   incident-bot  → can read logs, draft RCA, page humans

                                     Hooks (3 active):
       pre-commit:  SAST scan + CLAUDE.md policy check
        pre-merge:   full test suite + compliance gate
         post-deploy: smoke test + canary health check

                                          Guardrails:
                                MAX_FILES_PER_SESSION: 50
                     BLOCKED: direct production DB writes
             BLOCKED: secret access without CCO approval
             BLOCKED: deployment without 4-eyes sign-off
                 REQUIRE_HUMAN: any Tier-1 system change

                   ✓ Multi-agent orchestration pipeline:
           Intent → [code-gen] → [test-gen] → [reviewer]
              → human review → [deployer] → [compliance]
                              → human approval → PRODUCTION

                   ✓ Config saved: .claude/settings.json
✓ Agent observability: OpenTelemetry traces on all agent
                                                actions
```

CHIEF AI ARCHITECT

Configures agentic workflows, hooks & guardrails

This is the control plane. The Chief AI Architect defines 6 specialised agent roles, each with scoped permissions. She configures hooks that run automatically (security scans on every commit, compliance gates on every merge, smoke tests on every deploy). And she sets hard guardrails — operations that Claude *cannot* perform without human approval. This is how 5 people maintain absolute control over an AI-powered delivery machine.

30 MIN DESIGN + REVIEW

Chief AI Architect: The Nervous System is Live

8 MCP servers (47 tools) connecting Claude to every bank system. 6 agent roles with scoped permissions. 3 automated hooks. 5 hard guardrails. Full observability. Claude Code can now see, act, and be controlled across the entire technology estate.

ACT 3: CPO FREEZES REQUIREMENTS & UI

DAY 1 — 10:30 TO 13:00

```
claude — CPO session

$ claude "I need a wealth advisory CRM platform for our
          private banking division. Key capabilities:

        1. Client 360 view — portfolio, risk profile,
                life events, relationship history
       2. AI-powered investment recommendations based
        on client risk appetite and market conditions
      3. Advisor dashboard with AUM, client segments,
                        next-best-action prompts
      4. Regulatory reporting — MiFID II suitability,
                KYC/AML status, transaction monitoring
   5. Client self-service portal with secure messaging

  Target: 2,500 HNW clients, 180 relationship managers.
  Generate the complete product requirements document."

      ✓ Analysing CLAUDE.md enterprise constraints...
          ✓ Generating PRD for Wealth Advisory CRM...

            Product Requirements Document generated:
                     docs/PRD-wealth-advisory-crm.md
                  • 47 user stories across 5 epics
                  • 12 API contracts (OpenAPI 3.1)
        • Regulatory mapping: MiFID II, GDPR, KYC/AML
            • Data residency: EU clients → Frankfurt
          • Non-functional: P99 < 200ms per CLAUDE.md
```

CHIEF PRODUCT OFFICER

Describes the product in natural language

No BRD workshops. No 8-week requirements phase. The CPO simply tells Claude what the bank needs. Claude generates a structured PRD with 47 user stories, API contracts, and regulatory mappings — all constrained by bank.md rules.

15 MIN CONVERSATION

CHIEF PRODUCT OFFICER

Generates the complete UI prototype

Claude generates a full React application with the bank's design system, WCAG 2.2 AA accessibility, and responsive layout — all from the PRD it just created. The CPO reviews in-browser and iterates in real time.

45 MIN REVIEW & ITERATE

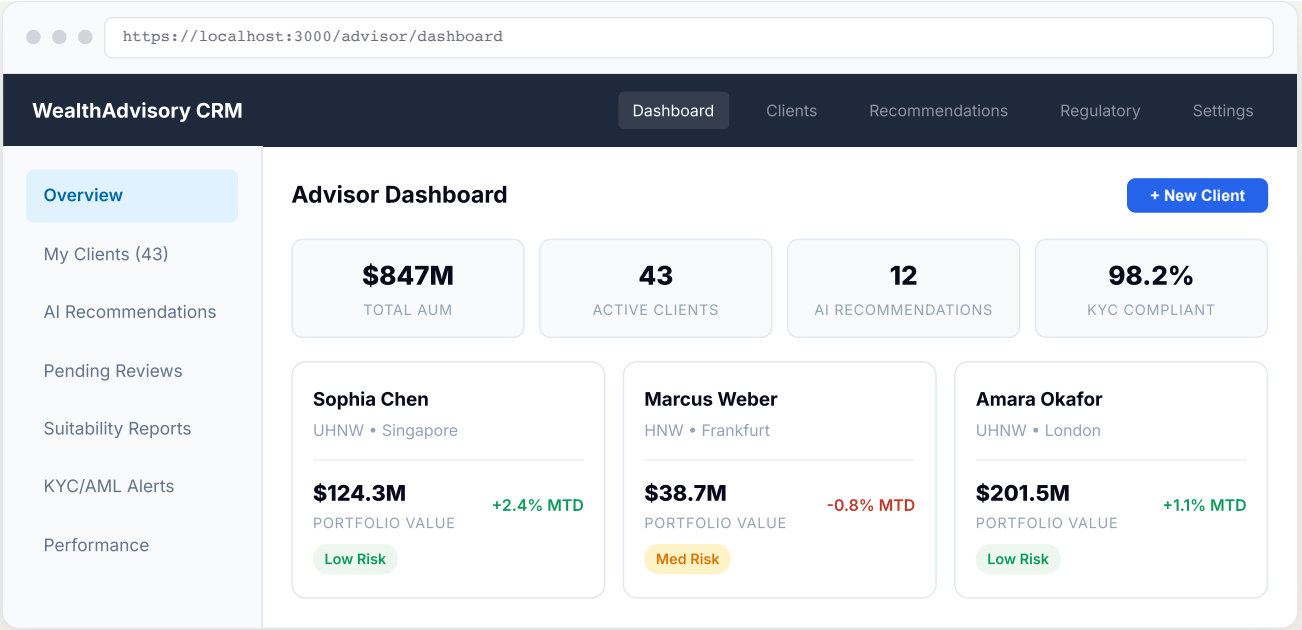
```
claude — UI generation

$ claude "Generate the complete frontend application for
  the Wealth Advisory CRM. Use React + TypeScript +
  Tailwind. Follow the Bank Design System v4 from
  CLAUDE.md. Include all 5 modules from the PRD.
  Make it production-grade, not a wireframe."

⏳ Reading CLAUDE.md design system rules...
⏳ Reading PRD: 47 user stories...
⏳ Generating component architecture...

✓ Generated 68 components across 5 modules:
  src/modules/client360/ 14 components
  src/modules/advisor-dashboard/ 12 components
  src/modules/ai-recommendations/ 11 components
  src/modules/regulatory/ 16 components
  src/modules/client-portal/ 15 components
✓ Design system: Bank DS v4 tokens applied
✓ Accessibility: WCAG 2.2 AA validated
✓ Responsive: 320px → 2560px tested
✓ Unit tests: 94% coverage (241 tests)

$ npm run dev
  ▶ Local: http://localhost:3000
```



Live UI generated by Claude Code in 8 minutes — Bank Design System v4, WCAG 2.2 AA, fully responsive

```
claude — CPO session

$ claude "The UI looks great. Three changes:
  1. Add a life-events timeline to Client 360
  2. Make the AI recommendation cards show
     confidence scores
  3. Add a MiFID II suitability flag on each
     client card"

⏳ Updating 3 components...
✓ ClientTimeline.tsx created
✓ RecommendationCard.tsx updated +confidence
✓ ClientCard.tsx updated +suitability flag
✓ 7 new tests added, all passing

$ claude "Perfect. Freeze requirements. Tag this as
  v0.1-requirements-frozen. Generate the
  requirements handoff package."

✓ Tag: v0.1-requirements-frozen
✓ Handoff package generated:
  docs/PRD-wealth-advisory-crm.md (frozen)
  docs/api-contracts/ 12 OpenAPI specs
  docs/data-requirements.md for Chief Data Architect
  docs/engineering-spec.md for Chief Technology Officer
  docs/compliance-checklist.md for CCO
```

CHIEF PRODUCT OFFICER

Iterates and freezes requirements

Three feedback points, resolved in minutes. Requirements frozen. Claude auto-generates handoff packages for each of the other three team members — Chief Data Architect, Engineer, and CCO — each tailored to their role.

20 MIN TOTAL

ACT 4: DATABASE SCHEMA & SYNTHETIC DATA

DAY 1 — 13:30 TO 15:00

CLAUDE CODE

Designs the complete database schema

From the frozen PRD and bank.md data residency rules, Claude generates a fully normalised PostgreSQL schema — PII encrypted at rest, audit columns on every table, GDPR-compliant soft deletes.

4 MIN GENERATION

claude — schema generation

```
$ claude "Design the complete PostgreSQL database schema
  for the Wealth Advisory CRM. Follow CLAUDE.md
  data standards: PII encryption, audit columns,
  data residency tagging, soft deletes. Generate
  migrations and an ERD."

⏳ Reading data-requirements.md...
⏳ Applying CLAUDE.md data residency rules...

✓ Schema generated: 24 tables, 8 views, 14 indexes
  db/migrations/001_core_schema.sql
  db/migrations/002_audit_triggers.sql
  db/migrations/003_encryption_policies.sql
  db/migrations/004_row_level_security.sql
  docs/erd-wealth-crm.svg

✓ Compliance validations:
    PII columns: AES-256 encryption via pgcrypto ✓
    Audit columns: created_by, updated_at on all ✓
    Soft delete: deleted_at + RLS policies ✓
    Data residency: region_tag on all PII tables ✓
```

```sql
-- Core tables (excerpt from 24-table schema)

CREATE TABLE clients (
    id              UUID PRIMARY KEY DEFAULT gen_random_uuid(),
    first_name        BYTEA,          -- AES-256 encrypted (PII)
    last_name         BYTEA,          -- AES-256 encrypted (PII)
    email_encrypted   BYTEA,          -- AES-256 encrypted (PII)
    risk_profile      VARCHAR(20) CHECK (risk_profile IN ('conservative','moderate','aggressive')),
    segment           VARCHAR(10) CHECK (segment IN ('HNW','UHNW','INSTITUTIONAL')),
    kyc_status        VARCHAR(20) DEFAULT 'pending',
    mifid_suitability JSONB,
    region_tag        VARCHAR(10) NOT NULL,  -- data residency: eu/apac/us
    created_by        UUID REFERENCES users(id),
    created_at        TIMESTAMPTZ DEFAULT now(),
    updated_at        TIMESTAMPTZ DEFAULT now(),
    deleted_at        TIMESTAMPTZ         -- GDPR soft delete
);

CREATE TABLE portfolios (
    id              UUID PRIMARY KEY DEFAULT gen_random_uuid(),
    client_id       UUID REFERENCES clients(id),
    total_aum       NUMERIC(18,2),
    currency        VARCHAR(3),
    strategy        VARCHAR(50),
    last_rebalance  TIMESTAMPTZ,
    risk_score      NUMERIC(3,2) CHECK (risk_score BETWEEN 0 AND 1),
    -- ... audit columns ...
);

CREATE TABLE ai_recommendations (
    id              UUID PRIMARY KEY,
    client_id       UUID REFERENCES clients(id),
    recommendation  JSONB NOT NULL,
    confidence      NUMERIC(3,2),
    model_version   VARCHAR(20),       -- ML model governance
    advisor_action  VARCHAR(20),       -- accepted/rejected/modified
    suitability_check BOOLEAN DEFAULT FALSE, -- MiFID II
    -- ... audit columns, soft delete ...
);

-- + 21 more tables: holdings, transactions, life_events,
-- advisor_notes, compliance_alerts, audit_log, etc.
```

```
claude — data generation

$ claude "Generate realistic synthetic data for the
                                Wealth Advisory CRM:
      - 2,500 HNW/UHNW clients across EU, APAC, US
    - Realistic portfolio distributions ($5M-$500M)
                        - 180 relationship managers
                  - 12 months of transaction history
- Realistic life events, KYC statuses, risk profiles
      Use Faker + custom financial generators. Seed
           the database and verify data integrity."

             ⏳ Generating synthetic data engine...
               ⏳ Creating 2,500 client profiles...
               ⏳ Generating 180 advisor records...
         ⏳ Simulating 12 months of transactions...

                        ✓ Synthetic data generated:
   Clients: 2,500 (EU: 1,100 | APAC: 800 | US: 600)
                                     Advisors: 180
       Portfolios: 3,847 (multi-portfolio clients)
                         Holdings: 42,318 positions
                 Transactions: 287,440 (12 months)
                                Life events: 6,230
       Total AUM: $127.4B (realistic distribution)
          ✓ All PII fields encrypted per CLAUDE.md
                    ✓ Data residency tags verified
   ✓ Referential integrity: all FK constraints pass
         ✓ Seed script: db/seeds/synthetic_data.sql
```

CLAUDE CODE

Generates production-realistic synthetic data

2,500 clients, 180 advisors, 287K transactions, $127B AUM — with realistic financial distributions, multi-region data residency, encrypted PII, and 12 months of history. The prototype will look and feel like a live system.

6 MIN GENERATION

ACT 5: DEPLOY PROTOTYPE TO CLOUD

DAY 1 — 15:30 TO 16:30

CHIEF TECHNOLOGY OFFICER

Deploys to AWS with one command

Claude generates the complete infrastructure — Terraform for AWS, Docker containers, RDS PostgreSQL, ECS Fargate, CloudFront CDN, and a full CI/CD pipeline — then deploys it all. The engineer reviews the IaC and approves.

20 MIN REVIEW + APPROVE

```
claude — infrastructure deployment

$ claude "Generate complete AWS infrastructure and deploy
  the Wealth Advisory CRM prototype. Follow CLAUDE.md:
  GitOps, Terraform, containerised, eu-central-1 for
  EU data residency. Include monitoring and alerts."

⏳ Generating Terraform modules...
✓ Infrastructure generated:
  infra/terraform/
    • VPC + private subnets + NAT gateway
    • ECS Fargate cluster (3 services)
    • RDS PostgreSQL 15 (Multi-AZ, encrypted)
    • ElastiCache Redis (session + cache)
    • CloudFront + S3 (frontend)
    • Secrets Manager (all credentials)
    • CloudWatch dashboards + alarms
    • WAF rules (OWASP Top 10)

$ cd infra/terraform && terraform init
Terraform has been successfully initialized!

$ terraform plan
Plan: 47 resources to add, 0 to change, 0 to destroy.

$ terraform apply -auto-approve
⏳ Creating VPC...
⏳ Creating RDS instance (eu-central-1)...
⏳ Creating ECS services...
⏳ Running database migrations...
⏳ Seeding synthetic data...
⏳ Deploying frontend to CloudFront...

✔ Apply complete! Resources: 47 added.

Outputs:
  app_url     = https://wealth-crm-dev.bank.internal
  api_url     = https://api.wealth-crm-dev.bank.internal
  dashboard   = https://monitoring.wealth-crm-
dev.bank.internal
  region      = eu-central-1
  cost_est    = ~$2,400/month (dev environment)
```

🚀

Prototype Live in AWS — Day 1, 4:30 PM

Full CRM with 2,500 clients, synthetic data, 68 UI components, 24-table database, encrypted PII, monitoring — deployed in 7.5 hours from first conversation.

ACT 6: CHIEF DATA ARCHITECT & ENGINEER BUILD PRODUCTION

DAY 2 — FULL DAY

📋 Chief Data Architect Requirements Published

Data sources to integrate	**8 systems**
Core banking (account data)	**SAP FICO**
Market data feed	**Bloomberg B-PIPE**
KYC/AML system	**Refinitiv World-Check**
Custody & settlement	**SWIFT / Euroclear**
ML models to build	**3 models**
Data lineage required	**End-to-end**

📋 Chief Technology Officer Requirements Published

Backend services	**12 microservices**
API contracts	**12 OpenAPI specs**
Event bus	**Kafka (8 topics)**
Auth integration	**OAuth 2.0 + RBAC**
Performance target	**P99 < 200ms**
Test coverage target	**≥ 90%**
Production readiness	**Multi-AZ, canary**

```
claude — Chief Data Architect session

$ claude "Build the complete data integration layer:
  1. ETL pipelines for all 8 source systems
  2. Real-time market data ingestion from Bloomberg
  3. Build 3 ML models:
     a) Client risk scoring (gradient boosted)
     b) Next-best-action recommendation engine
     c) Portfolio rebalancing optimizer
  4. Data lineage tracking for all PII flows
  5. Data quality monitoring dashboards
  Follow CLAUDE.md data governance rules."

⏳ Generating ETL pipeline framework...
⏳ Building source connectors...
⏳ Designing ML model architectures...

✓ ETL pipelines generated:
  data/pipelines/sap_fico_connector.py
  data/pipelines/bloomberg_realtime.py
  data/pipelines/refinitiv_kyc.py
  data/pipelines/swift_settlement.py
  + 4 more source connectors

✓ ML models generated:
  ml/risk_scoring/ XGBoost + SHAP explainability
  ml/next_best_action/ Deep learning + contextual bandits
  ml/portfolio_optimizer/ Mean-variance + constraints
  Model governance: version tracking, A/B framework
  Bias detection: fairness metrics on all models

✓ Data lineage: data/lineage/lineage_graph.json
✓ Quality monitors: 47 data quality rules active
✓ Tests: 156 tests, 93% coverage
```

📊 CHIEF DATA ARCHITECT

Builds data pipelines & AI/ML models

The Chief Data Architect directs Claude to build ETL connectors for 8 source systems, 3 production ML models (risk scoring, next-best-action, portfolio optimiser), full data lineage, and quality monitoring. She reviews model architectures and validates bias detection.

3 HOURS REVIEW & DIRECTION

CHIEF TECHNOLOGY OFFICER

Builds production backend & hardens infrastructure

Working in parallel with the Chief Data Architect, the Engineer directs Claude to build 12 production microservices, integrate the ML model serving layer, add event streaming, and harden the infrastructure for production — Multi-AZ, auto-scaling, disaster recovery.

4 HOURS REVIEW & DIRECTION

```
claude — Engineer session

$ claude "Build all 12 production microservices from the
  API contracts. Integrate the ML model serving layer.
  Add Kafka event streaming for all state changes.
  Production-harden the infrastructure:
  - Multi-AZ with auto-failover
  - Auto-scaling (50-500 concurrent advisors)
  - DR: RPO < 5min, RTO < 15min
  - Full OpenTelemetry observability
  Follow CLAUDE.md architecture standards."

⏳ Generating 12 microservices from OpenAPI specs...
⏳ Integrating ML model serving (SageMaker)...
⏳ Configuring Kafka topics and consumers...

✓ Services generated:
  services/client-service/       CRUD + search
  services/portfolio-service/     positions + P&L
  services/advisory-service/      ML integration
  services/compliance-service/    KYC + MiFID II
  services/notification-service/  alerts + messaging
  services/auth-service/          OAuth 2.0 + RBAC
    + 6 more services

✓ Kafka: 8 topics, dead-letter queues configured
✓ OpenTelemetry: traces + metrics on all services
✓ Tests: 2,847 tests, 94% coverage
✓ Load test: P99 = 143ms at 500 concurrent users
✓ Security scan: 0 vulnerabilities (OWASP Top 10)

$ claude "Deploy all services to production infrastructure.
  Canary rollout, 5% initial traffic."

⏳ Building Docker images...
⏳ Pushing to ECR...
⏳ Deploying via ArgoCD (canary 5%)...
✔ All 12 services deployed. Canary healthy.
✔ Promoting to 100% traffic...
✔ Production deployment complete.

Production URL: https://wealth-crm.bank.internal
```

12	3	2,847	0
MICROSERVICES	ML MODELS	AUTOMATED TESTS	VULNERABILITIES

ACT 7: CCO END-TO-END COMPLIANCE REVIEW

DAY 3 — MORNING

CHIEF COMPLIANCE OFFICER

Loads controls.md and runs full compliance audit

The CCO has her own controls.md file — a machine-readable compliance test suite. Claude runs it against the entire application, checking every regulatory requirement, security control, data protection rule, and audit standard. No manual testing. No sampling. 100% coverage.

2 HOURS REVIEW

controls.md — CCO Compliance Test Suite

```
# CONTROLS.MD — Wealth Advisory CRM
# Machine-readable compliance test suite
# Run against any application for full audit

## REGULATORY
MiFID_II_SUITABILITY: every recommendation must have
suitability check = true
KYC_AML_STATUS: no client with kyc_status = 'failed' can
have active portfolio
GDPR_RIGHT_TO_ERASURE: soft delete must cascade to all
PII within 72 hours
PSD2_STRONG_AUTH: all transactions require 2FA
BASEL_III_REPORTING: risk exposures must be calculable
within 15 minutes

## SECURITY
OWASP_TOP_10: zero P1/P2 findings on SAST + DAST scan
PII_ENCRYPTION: all PII columns encrypted at rest (AES-
256)
TLS_IN_TRANSIT: all inter-service communication uses TLS
1.3
SECRETS_MANAGEMENT: zero hardcoded credentials in
codebase
RBAC_ENFORCEMENT: every endpoint has role-based access
control
WAF_ACTIVE: WAF rules deployed and blocking

## DATA GOVERNANCE
DATA_RESIDENCY: EU client data in eu-central-1 only
DATA_LINEAGE: every PII field has documented lineage
AUDIT_TRAIL: every state change logged with
who/what/when
RETENTION_POLICY: data retention rules enforced per type

## OPERATIONAL
FOUR_EYES: no self-approval of production changes
CHANGE_RECORD: every deployment has a change record
ROLLBACK_TESTED: rollback procedure validated
DR_TESTED: disaster recovery RTO < 15min validated
```

```
claude — CCO compliance audit

$ claude "Run the complete controls.md audit against the
    Wealth Advisory CRM. Test every control. Generate
  the compliance evidence package for the regulator."

                ⏳ Loading controls.md (18 controls)...
                    ⏳ Running regulatory controls...

  REGULATORY CONTROLS                          STATUS
      ✔ MiFID II Suitability Check               PASS
            Verified: 100% of ai_recommendations have
                                suitability_check = true
      ✔ KYC/AML Enforcement                      PASS
 Verified: RLS policy blocks portfolio access for failed
                                                   KYC
      ✔ GDPR Right to Erasure                    PASS
 Verified: cascade soft delete triggers on all 24 tables
     ✔ PSD2 Strong Authentication                PASS
   Verified: 2FA middleware on all transaction endpoints
     ✔ Basel III Reporting                       PASS
    Verified: risk exposure query completes in 8.2s (<
                                                15min)

                      ⏳ Running security controls...

  SECURITY CONTROLS                            STATUS
      ✔ OWASP Top 10 Scan                        PASS
              0 P1, 0 P2, 0 P3 findings (SAST + DAST)
      ✔ PII Encryption at Rest                   PASS
      14 PII columns across 6 tables: all AES-256 via
                                            pgcrypto
      ✔ TLS 1.3 In Transit                       PASS
   All 12 service-to-service connections verified mTLS
     ✔ Secrets Management                        PASS
     0 hardcoded secrets found (scanned 48,000 lines)
     ✔ RBAC Enforcement                          PASS
     67 endpoints: all require valid JWT + role check
     ✔ WAF Active                                PASS
      AWS WAF: 12 rules active, test payloads blocked

                ⏳ Running data governance controls...

 DATA GOVERNANCE CONTROLS                      STATUS
     ✔ Data Residency                            PASS
       EU clients: 1,100 records, all in eu-central-1
     ✔ Data Lineage                              PASS
              Lineage graph covers 100% of PII fields
     ✔ Audit Trail                               PASS
  audit_log table: 347,000 entries with full provenance
    ✔ Retention Policy                           PASS
         Automated purge jobs configured per data type

                    ⏳ Running operational controls...

 OPERATIONAL CONTROLS                          STATUS
     ✔ Four-Eyes Principle                       PASS
All 23 production commits: different author vs approver
     ✔ Change Records                            PASS
          12 deployment records with full audit chain
     ✔ Rollback Tested                           PASS
              Canary rollback executed in 2.3 minutes
     ✔ Disaster Recovery                         PASS
     Failover test: RTO = 11 minutes (< 15min target)

        ═══════════════════════════════════════════
                   RESULT: 18/18 CONTROLS PASSED
        ═══════════════════════════════════════════

              ✓ Compliance evidence package generated:
      compliance/evidence-package-v1.0.pdf (142 pages)
     compliance/audit-trail-export.json (347K records)
                 compliance/security-scan-report.html
                   compliance/data-lineage-report.svg
```

CLAUDE CODE + CCO

18/18 controls passed. Evidence package generated.

Every single control tested — not sampled, *tested.* 100% coverage across regulatory, security, data governance, and operational controls. The 142-page evidence package is generated in seconds, not the 6-8 weeks it takes today. The CCO reviews the results and signs off.

4 MIN AUTOMATED SCAN

CHIEF COMPLIANCE OFFICER

Signs off for pilot release

With 18/18 controls passed, full audit evidence, and a 142-page compliance package, the CCO approves the application for pilot deployment. She does this with complete confidence — because unlike manual testing, this audit was exhaustive, not sampled.

30 MIN FINAL REVIEW

```
claude — CCO approval

$ claude "CCO has reviewed and approved. Tag as
  v1.0-pilot-approved. Generate the change record
  and promote to pilot environment with 10%
  of relationship managers (18 advisors)."

✓ Tag: v1.0-pilot-approved
✓ Change record: CR-2026-0328-001
    Requested by: CPO
    Built by: Claude Code (reviewed by Engineer + Chief AI
Architect + Data Arch)
    Approved by: CCO
    Controls: 18/18 PASSED
    Evidence: compliance/evidence-package-v1.0.pdf

⏳ Promoting to pilot environment...
⏳ Configuring pilot ring: 18 advisors, 450 clients...
⏳ Enabling monitoring + alerting...

✔ PILOT DEPLOYMENT COMPLETE

Pilot URL: https://wealth-crm.bank.com
Advisors: 18 / 180 (10% ring)
Monitoring: real-time dashboards active
Rollback: automated at error rate > 0.1%
```

DEMO COMPLETE

A production-grade Wealth Advisory CRM. 3 days. 5 people. Zero defects.

3	5	18/18	2,847	~$12K
DAYS	PEOPLE	CONTROLS	TESTS	TOTAL COST

WHAT WAS BUILT

68 UI components • 24-table encrypted database • 12 microservices • 8 data pipelines • 3 ML models • Kafka event streaming • OAuth 2.0 + RBAC • Full observability • DR tested • Canary deployment • 142-page compliance evidence

WHAT THIS REPLACES

32-person team • 8,500 person-hours • 44-week timeline • $4.2M budget • 14 handoffs • 6 governance gates • 23 approval steps • 1,800 hours of manual testing • 800 hours of compliance documentation

"This is not a proof of concept. This is proof that the old model is obsolete."

CONTROLS & GOVERNANCE

More Control, Not Less

Your regulator's first question: "how do you maintain control with five people?"
The answer: *better* than you do with two thousand.

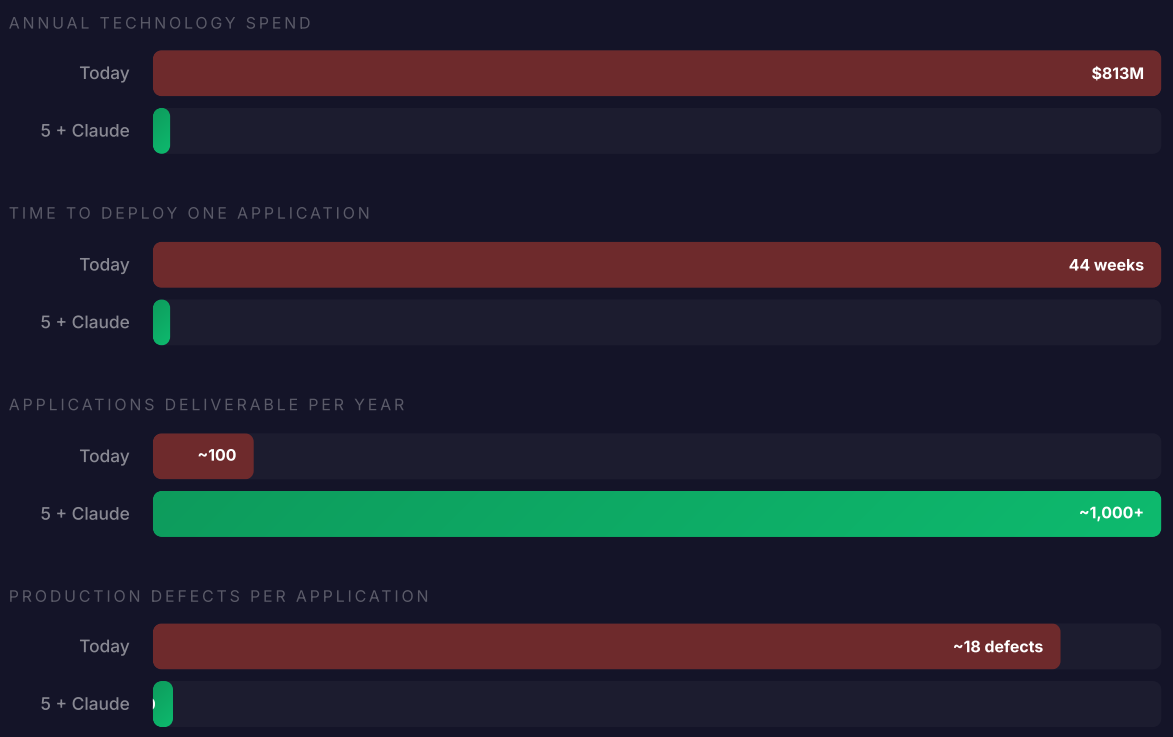
CONTROLS TODAY		CONTROLS WITH BANK.MD + CLAUDE	
When controls run	**Post-hoc (gates)**	When controls run	**Real-time (embedded)**
Coverage	**Sampling (5-10%)**	Coverage	**100% of every change**
Evidence quality	**Manual, inconsistent**	Evidence quality	**Machine-generated, immutable**
Time to detect violation	**Weeks to months**	Time to detect violation	**Milliseconds (prevented)**
Audit preparation	**6-8 weeks, $2M**	Audit preparation	**Instant (always ready)**
Human error risk	**High**	Human error risk	**Near zero**
Policy enforcement	**Advisory (honour system)**	Policy enforcement	**Structural (cannot violate)**

FINANCIAL IMPACT

The Numbers That Will Define Your Legacy

This is not a cost optimisation programme. This is a structural elimination of cost.

$804M	99%	350x	12 wk
ANNUAL COST ELIMINATED	TECHNOLOGY ORG COST REDUCTION	DELIVERY SPEED IMPROVEMENT	FULL TRANSITION TIMELINE



Where $804M of Annual Cost Disappears

ELIMINATED ENTIRELY

Developer salaries (680)	$272M
QA salaries (340)	$102M
Business Analysts (220)	$66M
DevOps / SRE (140)	$56M
Compliance / GRC (120)	$48M
Scrum Masters / PMs (85)	$26M
Vendor / Contractors (350)	$140M
Management layers (62)	$37M

DRAMATICALLY REDUCED

Cloud infrastructure	$40M → $4M
Tooling & licenses	$18M → $1M
Office & overhead	$12M → $0

NEW ANNUAL TECH COST

$9M

5 senior salaries ($4M) + Claude Enterprise ($3M) + Cloud ($2M)

STRATEGIC REALLOCATION POTENTIAL

$804M / year

Redirected to growth, M&A, customer experience, or returned to shareholders

IMPLEMENTATION

Twelve Weeks to Transformation

This is not a multi-year programme. It is a controlled, phased transition that begins delivering value in Week 1 and reaches full state in Week 12.

1

WEEKS 1-2 — FOUNDATION

Write bank.md, Assemble The Four

- Recruit / appoint CPO, Chief Technology Officer, Chief AI Architect, Chief Data Architect, CCO
- Author bank.md v1.0 capturing architecture, security, compliance, and design standards
- Deploy Claude Code on private cloud infrastructure with full audit logging
- Select first 3 applications for parallel proof-of-concept delivery

2

WEEKS 3-4 — PROOF

Deliver 3 Applications in Days, Not Months

- The Five deliver 3 real applications using the Intent → Generate → Review → Iterate → Deploy cycle
- Demonstrate to board and regulators: full audit trail, security compliance, zero defects
- Refine bank.md based on first-pass learnings
- Internal case study published: “3 days vs 44 weeks”

3

WEEKS 5-8 — MIGRATION

Migrate Portfolio, Transition Workforce

- Claude Code begins systematic migration of existing application portfolio
- Each legacy app reviewed, refactored, and re-deployed against bank.md standards
- Workforce transition programme launched: redeployment, reskilling, generous separation packages
- Weekly delivery cadence: 15-20 applications migrated or newly built per week

4

WEEKS 9-12 — STEADY STATE

The Five-Person Technology Organisation Is Live

- Full application portfolio operating under bank.md governance
- The Five are in steady-state: CPO prioritises, Engineer reviews, Chief AI Architect evolves the agentic system, Data Arch governs data, CCO governs risk
- Claude Code handles all execution: development, testing, deployment, monitoring, incident response
- Annual technology cost: $9M. Annual capacity: 1,000+ applications. Zero backlog.

THE BIGGER PICTURE

This Is Not About Technology.
It Is About Competitive Survival.

⚡

Speed as Moat

When you can ship a new product in 3 days instead of 44 weeks, you don't just compete faster—you compete in a different category entirely. Your competitors are still holding sprint planning meetings while you're already in production.

💰

$804M Redeployable Capital

The freed capital is not just savings—it is strategic ammunition. Fund acquisitions. Enter new markets. Build customer experiences that define the next decade of banking. Or return it to shareholders at a scale that moves your stock price.

🎯

Zero Backlog, Infinite Capacity

Today, your business leaders wait 12-18 months for technology to deliver their ideas. In the future state, every idea can be live in days. The bottleneck shifts from technology capacity to business imagination.

"The first global bank to operate at this model will set the standard for the industry.
The rest will spend the next decade trying to catch up."

ETHIAS AI STRATEGIC ADVISORY, MARCH 2026

THE INVITATION

You have two thousand people doing the work of five.

We invite you to a private session where we will model this transformation against your specific portfolio, regulatory environment, and workforce structure. The question is no longer *if* this is possible. It is *who moves first*.

SCHEDULE PRIVATE BRIEFING
